

RMLink Overview

Last Updated Friday, 14 November 2008

RMLink ® Standard

RMLink® Standard facilitates the communication and data sharing between Telelogic's DOORS® Server and today's leading Product Lifecycle Management (PLM) systems.

PTC Windchill® Integration

- View a DOORS Module.
- View a DOORS folder/project hierarchy.
- View an individual Requirement and its attributes.
- Integrated with the WC Product Structure Explorer.
- View Requirement Relationships to Parts and Documents.
- Provides In/Out links and associated Change Proposals.
- Searching the DOORS database for specific Requirements.
- Ability to download the Requirement text in Microsoft Word format.
- Linking DOORS Requirements to Windchill Documents and Parts. [More Information](#)

RMLink ® Enterprise

RMLink ® Enterprise provides all of the functionality of RMLink ® Standard and extends its features to include but not limited to...

PTC Windchill® Integration

- Integration with the Windchill Change2 system.
- Submit a DOORS Issue to the Change2 as a piece of Affected Data.
- DOORS Issue is an iterated object that tracks From/To language changes.
- Enables Cross Navigation and Traceability.
- Supports the creation of DOORS Change Proposals from the Windchill UI.

Why is RMLink ® the solution for your company?

Scalability

RMLink ® is highly scalable and provides support for accessing multiple DOORS databases.

Performance

RMLink ® offers superb caching availability. The RMLink ® Queue Manager allows for immediate data processing and retrieval. **Redundancy**

RMLink ® ensures that your information will always be accessible. The RMLink ® Client Manager allows your users to access and retrieve data at anytime. **Web-based User Interface**

RMLink ® provides an easy to use web-based interface that allows the user to navigate DOORS Projects, Modules, and Requirements. **Unified Access Control**

RMLink ® offers a new unified access control method for system administrators to easily map user accounts across multiple platforms. **Package-based Installer**

RMLink ® packaged-based installer allows System Administrators to easily deploy RMLink ® Server, RMLink ® Queue Managers, and the RMLink ® Client Manager. The RMLink ® installation package is offered in shrink wrap and click wrap packages. Regardless of your preferred installation method, the RMLink ® Setup Wizard easily guides you through the install. **Rapid Deployment**

Sometimes your deployment strategies call for a one stop solution. RMLink ® is designed to integrate seamlessly into your network. However in some instances, network infrastructure may not be adequate or to scale for a rapid deployment. For situations such as this and Enterprise deployments, RMLink ® is offered in a single server solution which is pre-configured by a Stoneworks Software Application Engineer prior to installation.
